

Flood Insights ArcGIS integration

What is the Flood Insights ArcGIS integration?

- Each flood event has a flood depth layer (hosted tiled imagery layer) available on ArcGIS Online
- Layers are automatically updated as each event progresses and new releases are published
- Data is automatically shared through ArcGIS Online groups
 - Group to group sharing, and partnered collaborations for ArcGIS Online organisations
 - Distributed collaborations for ArcGIS Enterprise environments

Pictured below: An example of ICEYE's flood depth as a hosted tiled imagery layer after Tropical Cyclone Alfred in Australia

Available to ICEYE customers
from October 2025
