

# ArcGIS Enterprise Health Check

## Ensure ArcGIS Enterprise operates at peak performance for users

Regular review of an ArcGIS Enterprise (AGE) environment helps resolve performance issues, improve workflow efficiency, and optimise system configuration.

### How we can help

We conduct an *ArcGIS Enterprise Health Check* to evaluate the environment, configuration, and workflows of ArcGIS Enterprise and identify inefficiencies that impact performance. A health check ensures that the system is optimised to meet current and future needs and can reliably support operational outcomes. Based on the findings, we provide a detailed report with actionable recommendations to guide ongoing improvements and planning.

### Why it matters

Without a dedicated administrator or a team with the right technical skills and experience, the health of ArcGIS Enterprise can decline. A health check identifies easily fixable configuration issues and ensures that the ArcGIS Enterprise environment is optimally configured. This enables organisations to cost-effectively address configuration issues and maximise efficiency, supporting current and future workflows.

### Outcomes for you

Gain confidence within your organisation that ArcGIS Enterprise is optimally configured and effectively contributes to operations.

Identify and fix easily resolvable configuration issues to maximise performance.

Get a report with actionable recommendations to restore the health of ArcGIS Enterprise and guide continuous improvement.
